ARSH JAVED

Software Development Engineer

Dehradun, India | arsh0javed@gmail.com | github.com/metarsh | linkedin.com/in/arsh-javed

Education

Graphic Era (Deemed to be) University Dehradun, India
B.Tech in Computer Science and Engineering *August 2023 – August 2027*
CGPA: 8.16 / 10.0

Skills

Languages: Python, TypeScript, SQL

Databases: MongoDB, PostgreSQL, Redis

Cloud (IaaS & PaaS): Oracle Cloud Infrastructure (OCI), Azure, DigitalOcean, Vercel, Render, Railway, Cloudflare Pages

DevOps & Infrastructure: Docker, Docker Compose, Linux, Nginx, Git, GitHub Actions, Coolify, Portainer

Projects

Leadly github.com/metarsh/leadly
TypeScript, PostgreSQL, Redis, Docker Compose, Nginx, Coolify, OCI *2025 – Present*

- Owned backend architecture, database schema, and REST APIs for a B2B SaaS that finds leads from Reddit, backed by PostgreSQL and Redis.
- Built session-based authentication and security flows from scratch, including email/password login, email verification, Google OAuth, password recovery, and Redis rate limiting (user-level and IP-level).
- Implemented background workers and scheduled jobs to fetch Reddit posts, score them, and match leads against customer profiles using AI providers.
- Containerized backend, worker, and frontend services with Docker Compose, configured GitHub Actions CI, and self-hosted Coolify on an Ubuntu Linux VM on Oracle Cloud (OCI), pointing custom domains to the server IP and routing both Leadly and Coolify behind an Nginx reverse proxy.

Emilia github.com/metarsh/emilia
Python, MongoDB, Redis, Docker, Portainer, Linux, OCI *2022 – Present*

- Built and maintained an open-source multipurpose Telegram bot for group moderation, spam control, and music utilities, used by 900K+ users across 5,900+ chats.
- Added a bot-cloning system that lets users run their own independent bot instances (70+ active clones).
- Improved query speeds and prevented abuse by implementing MongoDB database indexing, Redis caching, and rate limiting.
- Self-hosted the bot in Docker containers managed through Portainer on an Ubuntu Linux VM on Oracle Cloud (OCI), with automated 24-hour database backups.

Achievements

- Won 1st place at EnCode 2025 hackathon organized by E-Cell, IIT Guwahati.
- Placed in the top 5 (PolicyBazaar track) at Google GenAI Exchange Hackathon 2024 and invited to the Google Gurgaon office.
- First-authored and presented two accepted conference research papers at IC2E3 2026 (NIT Uttarakhand) and IEEE INDISCON 2026 (MNIT Jaipur).
- Finalist in 5+ hackathons and participated in 20+ hackathons.
